SUMMARY

Frontend architect with 11+ years defining technical direction for large React and TypeScript platforms. Set architecture and standards across multi-brand, multi-locale systems; design shared platform capabilities that other teams build on; and lead engineers through design review, mentoring, and cross-team API alignment. Domain depth in regulated fintech and enterprise e-commerce serving 1M+ users.

ARCHITECTURE & TECHNICAL LEADERSHIP

- **Platform scope** — Architected NX Monorepo infrastructure serving 5 brands across 12 locales: CSRF protection, GraphQL proxy for server-side credentials, and React Query SSR with HydrationBoundary — shared foundations consumed by every delivery pod.
- **Build & release architecture** — Unified local development for SigFig's shared core repo and per-partner repos into a single folder structure using Vite, and re-engineered the CI/CD pipeline to drive both from one place — a partner deployment now triggers the core pipeline automatically, removing manual release sequencing.
- **Design authority** — Promoted to lead a delivery pod within weeks of joining Publicis Sapient; owned solution design and architectural planning, presented designs for senior-architect review before rollout, and set implementation direction for other engineers.
- **Cross-team influence** — Drove API contract definition across frontend, backend and product teams; unblocked engineers across the pod on debugging and complex design problems.
- **Design systems & micro-frontends** — Built component systems from scratch twice (Foyr molecules-and-components library, shared Design System at Publicis Sapient); launched Foyr Neo's micro-frontend architecture with an interoperability layer bridging Vue and the Three.js engine.
- **Standards & mentoring** — Delivered WCAG 2.1 AA with zero audit violations across an enterprise platform and established TDD practice (Jest, RTL); trained and mentored junior engineers through architecture decisions, code review and sprint planning.

TECHNICAL SKILLS

Core: JavaScript (ES6+), TypeScript, React.js, Next.js 15, Vue.js, Nuxt.js

Architecture: Frontend Architecture, System Design, Micro-frontends, Design Systems, NX Monorepo, SSR / Hydration, Multi-tenant & Multi-locale Platforms

State & Data: Zustand, Redux, React Query, Context API, React Hook Form, GraphQL, REST

Platform & Quality: Vite, Webpack, CI/CD, Git, Jest, React Testing Library, TDD, Storybook, WCAG 2.1 AA, Performance Optimization

Leadership: Solution Design, Design Review, Technical Mentoring, Cross-functional Collaboration, Stakeholder Communication, Agile / Scrum

EXPERIENCE

Lead Frontend Engineer (Senior Experience Engineer) — Publicis Sapient (Contract) Aug 2025 – Mar 2026

Client: Goodyear — US retail e-commerce platform · Gurugram, India (Hybrid)

- Joined one of 5 delivery pods and was promoted to lead it within weeks — owning solution design, architectural planning and implementation guidance for other developers.
- Designed centralized, shared capabilities used across the platform and had them reviewed by the senior architect prior to rollout.
- Architected the authentication domain end-to-end — sign-in, registration, password reset, user profile and address modules — on Next.js 15, TypeScript and GraphQL.
- Owned Order History and Order Details across multiple fulfillment types on the shared Design System; migrated global state from React Context to Zustand for fine-grained subscriptions.
- Coordinated across teams to finalise API contracts; delivered WCAG 2.1 AA compliance with zero audit violations.

Software Development Engineer 2, Frontend — SigFig

Mar 2022 – Jan 2025

Digital wealth-management & robo-advisory platform — 1M+ end users via banking partners · Remote

- Ran R&D to run the core and partner repositories from one folder structure with Vite, then rebuilt the CI/CD pipeline to manage both flows centrally — deploying a partner repo automatically runs the core pipeline first.
- Rebuilt the questionnaire 'playback' module against a hard 100-object Contentstack limit by migrating from an object-based to an array-of-objects model, restoring scalable detail rendering.
- Built schema-driven questionnaires and forms (React Hook Form, TypeScript) for investment, suitability and regulatory flows with field-level validation and error handling.
- Delivered core fintech modules — employer-sponsored plans, brokerage 'add funds' and new-client onboarding — in the shared core repo consumed by all banking partners; built out two new bank partner repositories.
- Reduced application load times ~45% via code-splitting, React.memo and client-side caching; developed a React-PDF portfolio/proposal generator.
- Maintained WCAG 2.1 AA accessibility and strong Jest/RTL coverage through TDD.

Senior Frontend Developer — Foyr (RBJ Technologies)

Apr 2019 – Jul 2021

Browser-based real-time 3D interior-design platform — 100K+ designers across 30+ countries · Hyderabad, India

- Principal frontend engineer for the core product — built from scratch to production (Vue.js, Nuxt.js, Vuex): dashboard, frontend authentication wired to backend, and all primary application surfaces.
- Designed a bidirectional middleware between the Vue interaction layer and the Three.js engine: property changes in Vue (e.g. object height) invoke the 3D engine to update the 3D/2D canvas in real time, and engine-side changes propagate back.
- Created a molecules-and-components design system that eliminated duplicate UI and became the shared vocabulary for feature teams; integrated Algolia-powered search for in-canvas object placement.
- Trained and mentored 2 junior engineers; guided architecture decisions, code reviews and sprint planning.

Senior Frontend Developer — Core Value Technologies

Jul 2021 – Mar 2022

E-commerce SaaS · Remote

- Built a React.js merchant dashboard with real-time analytics enabling merchants to create dynamic, personalized storefront content.
- Implemented internationalization with react-intl across 12 locales; reduced delivery time via a reusable component library.

Independent Frontend & GenAI Engineer (Career Focus Period)

Jan 2025 – Aug 2025

- Upskilled in GenAI engineering (Model Context Protocol, Claude Code, LLM workflows, prompt engineering) and shipped QuizKode — an AI-powered quiz platform on Next.js + TypeScript with real-time code evaluation.

EARLIER EXPERIENCE

- Senior Developer, Grarri (2018–2019) — Angular.js/Node.js/MongoDB platform · Software Engineer, IIT Delhi (2015–2016) — Rural Housing Knowledge Network (Python, Flask) · Freelance Web Developer (2014–2018) · Began career in telecom/RF engineering (2012–2014).

PROJECTS

- **QuizKode** — AI-powered quiz platform with real-time code evaluation (Next.js, TypeScript, Vercel). quizkode.com
- **Personal Portfolio** — Next.js site (98/100 Lighthouse) with Webpack optimization and Framer Motion. aayushsingh-portfolio.vercel.app

CERTIFICATIONS & EDUCATION

- B.Tech, Electronics & Communication — GRD-IMT, Dehradun (Uttarakhand Technical University), 2012 · Cutshort Certified: React.js (Advanced), JavaScript (Advanced) · IBM: Generative AI & Prompt Engineering.
